Who We Are?

itTrident, delivering IT Services for more than a decade, continually upskilling and have developed a robust team with highest expertise. Our competency spans the entire IT industry in handling end-to-end application systems, also enabling organizations to achieve best results in their business processes.
The value proposition that we bring in empowering people with technology makes a huge difference.

What We Do?

- Deep technical expertise, save the expense of training your staff for skills they will never use, rather gain access to staff with specialist skills.
- Extremely flexible, pay-as-you-go payment plan allows for quick growth when necessary, or cost savings when you need to consolidate.
- Robust infrastructure, run under 24/7 x 365 management with compliance approval security procedures.
- Virtual help desk, with service level agreements in place you can be sure of continuity of service, focus on your core offering and leverage your business against the competition.
- Reliable architecture, centralize all your applications and servers within managed data centers, this leads to improved work performance, regardless of location.

Quality Assurance Consulting

itTrident design and manage tailored Testing Strategies to meet your quality objectives. We can also deliver a quality audit of your current SDLC processes providing sound recommendations for immediate and strategic process improvements.

MEAN Stack Development

itTrident is flag-bearer of websites that are highly functional from front-end as well as back-end. Our expertise in development of Hybrid App's runs deep. We formulated methodical strategies and solutions to best meet your enterprise needs that attract wider business profits.

- Web Application Development
- E-Commerce Development
- CMS Development
- Web Services & API Development
- API & 3rd Party Integration

Scaled Agile Services

We know the value of seamlessly integrating with your IT leaders and teams. By collaborating together, we can improve efficiency, enhance speed, increase quality and create greater predictability across your entire project. We will also help you become more adaptable to and flexible with unplanned issues ensuring consistent delivery.

Independent Software Testing

Our independent software testing services help you cut unnecessary costs by identifying software defects early, release your mobile/desktop application faster without compromising quality, and improve user experience with a superior, bug-free product.

DevOps & Cloud Services

Build, deploy and test, all with a single click. Our leading-edge DevOps practice will see you experience rapid change through automation, and is designed as your strategic business enabler. DevOps gives you access to the continuous delivery of technology through a collaborative culture, and shared performance metrics that link directly to business results. Also, increase your organisational agility, flexibility, and competitive advantage with our cloud services.

Test Automation & Performance

We build automated testing frameworks using a wide range of enterprise or open-source software tooling to industry best practices. Our Performance Testing service delivers a comprehensive and effective performance risk assessment of your software solution focusing on end user experience.

Project Management Support

Our team will help your business make better decisions by providing expert-level business intelligence (BI) services. Our BI services support organizations optimize their capabilities to leverage various types of data and make it into something the business can use to make better and more informed choices.
